Reflection Questions

- Did your estimations reflect the actual effort.
Yes since i moved the the tasks on the board.
- Was your backlog well prioritized.
Yes. I put flag evaluation, rollout, and performance first since those are the core of the system, then moved environment overrides, sync, and access control to the second sprint.
- How did your simulated sprint align with your plan.
It matched on paper since every planned story reached done, but only because I dragged all the cards through the board manually on day one instead of the work happening gradually.
- What insights did the burndown chart give about your teams capacity.
The charts drop straight down instead of sloping gradually like a real teams chart

would. That kind of drop usually means the sprint was overestimated, since finishing everything on day one suggests the team could have taken on more work.
